

FOR IMMEDIATE RELEASE:

Comotiv Systems™ Releases Version 3.6 of Comotiv Collaboration™

(Portland, OR — June 13, 2006) Comotiv Systems is pleased to announce the release of Comotiv Collaboration version 3.6, the latest upgrade to their feature-rich communication and collaboration product.

In addition to its standard features of Web-based audio/video conferencing, data conferencing, file-sharing, and document storage, Comotiv Collaboration version 3.6 adds a plugin that coordinates Comotiv Collaboration's conference, appointment, contact, and task features with Microsoft Outlook. The latest version of Comotiv Collaboration also includes a Search function that allows all documents and threaded discussions in the Workspace to be searched for easy retrieval.

The Search module is a toolbar-bound text field, where users can enter words to locate pertinent or desired files (including Word, Acrobat, and Excel files), or threaded discussions in the Workspace. Found items can be opened instantly in the Workspace. If so desired, keywords can be added to documents make searches faster and more specific.

With the Outlook plugin, users can synchronize their Comotiv Collaboration items with Outlook by setting a timed import option, or they can simply click the Import Now button to make sure that everything is up-to-date. Users can also decide which item types, such as appointments or contacts, are to be imported.

Comotiv Systems is an application service provider (ASP) that was founded in 1999. It is headquartered in Portland, Ore. Comotiv Systems' flagship product, Comotiv Collaboration, is an easy-to-use Web-based communications and collaboration application. It provides a central repository for document storage, along with modules for data conferencing, and audio/video conferencing.
